

Course M6451-ILT

Planning, Deploying and Managing Microsoft System Center Configuration Manager 2007

Five days, Instructor-Led

INTRODUCTION

This five-day instructor-led course provides students with the knowledge and skills to plan, deploy, and manage Configuration Manager 2007. The course focuses on planning and deploying sites and clients, configuring software distribution, deploying operating systems, and managing software updates. It also focuses on remote tools and managing mobile devices.

AUDIENCE

This course is intended for Systems Engineers with one to three years of experience supporting multiple desktop and server computers running Microsoft Windows in medium to large enterprise organizations, and who have a need to plan a Configuration Manager 2007 deployment.

Additionally, this course is intended for Administrators who are responsible for configuring and managing one or more Configuration Manager 2007 sites and all supporting systems. They have one to three years of experience supporting multiple desktop and server computers running Microsoft Windows Server in medium to large enterprise organizations.

PREREQUISITES

Before attending this course, students must have:

- A base-level understanding of Systems Management Server 2003.
- System Administrator-level working knowledge of:
- Deployment, configuration, and troubleshooting for Windows-based personal computers
- TCP/IP networking
- SQL Server
- Active Directory
- Basic Public Key Infrastructure concepts

COURSE OUTLINE

MODULE 1: OVERVIEW OF CONFIGURATION MANAGER 2007

This module provides an overview of Configuration Manager 2007 features. It also provides an overview of the Configuration Manager site architecture and clients.

- Lessons
- Where Configuration Manager 2007 Fits Within the System Center Solution
- Configuration Manager 2007 Features
- Overview of Configuration Manager Site Architecture
- Overview of Configuration Manager Client

MODULE 2: PLANNING AND DEPLOYING A SINGLE-SITE ARCHITECTURE

This module explains how to prepare for and deploy a Configuration Manager site. It also describes how to discover resources and how to upgrade an SMS 2003 site to Configuration Manager 2007.

Lessons

- Planning to Deploy a Configuration Manager Site
- Preparing to Deploy a Configuration Manager Site
- Installing a Configuration Manager Site Server

Course M6451-ILT

Planning, Deploying and Managing Microsoft System Center Configuration Manager 2007

Five days, Instructor-Led

- Discovering Resources
- Upgrading an SMS 2003 Site to Configuration Manager 2007

Lab : Deploying a Configuration Manager Site Server

- Extend the Active Directory schema
- Install a Configuration Manager site

Lab : Managing Users and Configuring Boundaries and Discovery Methods

- Manage Configuration Manager users
- Configure boundaries
- Enable and configure discovery methods

MODULE 3: PLANNING AND DEPLOYING CONFIGURATION MANAGER 2007 CLIENTS

This module explains how to prepare for and deploy Configuration Manager clients. It also describes how to manage client installations and how to troubleshoot client deployment issues.

Lessons

- Preparing for Client Deployment
- Deploying Clients
- Managing Configuration Manager Client Installations
- Troubleshooting Client Deployment

Lab : Deploying Configuration Manager Clients

- Prepare the site for client installation
- Install the Configuration Manager client using various installation methods

Lab : Reviewing Client Deployment

- Review client deployment

MODULE 4: COLLECTING INVENTORY AND METERING SOFTWARE USAGE

This module explains how to collect and manage hardware and software inventory. It also describes how to configure software metering.

Lessons

- Overview of Inventory Collection
- Collecting Hardware Inventory
- Collecting Software Inventory
- Managing Inventory
- Metering Software Usage

Lab : Collecting Inventory

- Configure and Manage Hardware Inventory
- Modify Hardware Inventory Collection
- Configure and Manage Software Inventory

Lab : Configuring Software Metering

- Configure software metering

MODULE 5: QUERYING AND REPORTING DATA

This module explains how to create and run queries and reports. It also describes how to create and run dashboards.

Lessons

- Introduction to the Architecture of Data and Status Queries
- Creating and Running Queries
- Configuring and Deploying a Reporting Point
- Creating and Running Reports
- Creating and Running Dashboards

Lab : Creating Queries

- Create a query
- Run your query and view the results
- Create and run a query

Lab : Creating a Reporting Point

- Create a reporting point

Lab : Creating Reports

- Create a list report
- Create a filter report
- Create a count report
- Enable drill through for reports

Lab : Creating a Dashboard

- Create a dashboard

MODULE 6: PREPARING FOR AND MANAGING SOFTWARE DISTRIBUTION

This module explains how to configure and manage software distribution. It also describes how to monitor and troubleshoot software distribution.

Lessons

- Overview of the Software Distribution Processes
- Preparing the Site for Software Distribution Objects
- Configuring Software Distribution Objects
- Creating and Configuring Collections
- Creating and Configuring Packages and Programs
- Distributing and Advertising a Program
- Monitoring and Troubleshooting Software Distribution

Lab : Preparing a Site for Software Distribution

- Configure the software distribution components
- Configure the Advertised Programs Client Agent
- Configure a distribution point

Lab : Deploying an Application Using Software Distribution

Five days, Instructor-Led

- Create a collection for software distribution
- Create and configure a package and program
- Distribute a package to distribution points
- Create an advertisement for a software package
- Install a software package
- Review results

MODULE 7: DEPLOYING OPERATING SYSTEMS USING CONFIGURATION MANAGER 2007

This module explains how to deploy operating systems using Configuration Manager. It also describes how to configure operating system deployments using PXE.

Lessons

- Overview of Operating System Deployment
- Task Sequences in Operating System Deployment
- Capturing an Operating System Image
- Deploying an Operating System
- Configuring Operating System Image Deployments using PXE

Lab : Capturing a Reference Computer Using Configuration Manager 2007

- Prepare the environment for Configuration Manager operating system deployment
- Create a capture media task sequence
- Create an image of the Windows Vista reference computer

Lab : Deploying Operating Systems Using PXE

- Configure the PXE environment
- Prepare a deployment task sequence and advertise it to a collection
- Boot the computer using PXE and install the reference image

MODULE 8: DEPLOYING AND MANAGING SOFTWARE UPDATES

This module explains how to prepare for and manage software updates in Configuration Manager. It also describes how to monitor and troubleshoot software updates.

Lessons

- Overview of Software Updates
- Preparing the Configuration Manager Infrastructure for Software Updates
- Managing Software Updates
- Monitoring and Troubleshooting Software Updates

Lab : Deploying and Managing Software Updates

- Configure the software update infrastructure
- Manage software updates to clients
- Monitor software updates

MODULE 9: WORKING WITH DESIRED CONFIGURATION MANAGEMENT IN CONFIGURATION MANAGER 2007

Five days, Instructor-Led

This module explains how to configure desired configuration management in Configuration Manager. It also describes how to view compliance results.

Lessons

- Overview of Desired Configuration Management
- Configuring Desired Configuration Management
- Viewing and Troubleshooting Compliance Results

Lab : Configuring Desired Configuration Management

- Configure desired configuration management
- Import and configure a configuration pack
- Assign the configuration pack to a collection
- View desired configuration management reports

MODULE 10: USING REMOTE TOOLS AND WAKE ON LAN FEATURES

This module explains how to work with Configuration Manager remote tools. It also describes how to configure and monitor Wake On LAN.

Lessons

- About Configuration Manager Remote Tools
- Configuring the Remote Tools Client Agent
- Monitoring and Securing Configuration Manager Remote Tools
- Configuration Manager Wake On LAN
- Configuring and Monitoring Wake On LAN

Lab : Configuring and Using Remote Tools

- Configure the Remote Tools Client Agent
- Use the Remote Tools
- Monitor Remote Tools usage

Lab : Configuring and Using Wake On LAN

- Enable and configure Wake On LAN
- View a report for Wake On LAN

MODULE 11: MANAGING MOBILE DEVICES USING CONFIGURATION MANAGER 2007`

This module provides an overview of mobile device management. It also describes how to configure server and client settings and how to manage mobile devices.

Lessons

- Overview of Mobile Device Management
- Configuring Server Settings to Support Mobile Device Management
- Configuring Client Settings
- Managing Mobile Devices

Lab : Configuring the Site Server to Support Mobile Device Management

Five days, Instructor-Led

- Configure operating system prerequisites
- Configure site systems to support mobile device management
- Configure client agents to support mobile device management

Lab : Managing Mobile Devices Using Configuration Manager 2007

- Configure the client deployment files
- Install the mobile device management client
- Manage the mobile device
- View mobile management reports

MODULE 12: MAINTAINING AND TROUBLESHOOTING CONFIGURATION MANAGER 2007

This module explains how to maintain Configuration Manager 2007 and how to troubleshoot Configuration Manager issues. It also describes how to backup and recover data and how to work with troubleshooting tools.

Lessons

- Maintaining Configuration Manager 2007
- Backup and Recovery of Configuration Manager 2007
- Configuration Manager Troubleshooting Tools

Lab : Maintaining and Troubleshooting a Configuration Manager Site System

- Backup a primary site system
- Use flowcharts
- Confirm backup is complete
- Perform a site repair

MODULE 13: PLANNING AND CONFIGURING A MULTIPLE SITE HIERARCHY

This module explains how to plan and configure a multiple-site hierarchy including installing a secondary site and installing a proxy management point. It also describes how to decommission sites and hierarchies and how to roam in multiple-site hierarchies.

Lessons

- Introduction to the Configuration Manager Site Hierarchy
- Configuring Configuration Manager Site Communications
- Installing a Secondary Site Server
- Decommissioning Sites and Hierarchies
- Roaming in Multiple Site Hierarchies

Lab : Planning a Configuration Manager 2007 Hierarchy

- Plan the hierarchy
- Prepare the server
- Configure communications for Seattle to Vancouver
- Configure communications for Vancouver to Seattle
- Join the Vancouver primary site to the Seattle primary site
- Verify the parent and child site are communicating
- Transfer site settings

Course M6451-ILT

Planning, Deploying and Managing Microsoft System Center Configuration Manager 2007

Five days, Instructor-Led

Lab : Installing Secondary Sites and Proxy Management Points

- Install a secondary site
- Install a proxy management point

Lab : Roaming Between Configuration Manager 2007 Sites

- Uninstall a secondary site.
- Advertise the Microsoft Office Excel Viewer.
- Install the Microsoft Office Excel Viewer on SEA-CL1.
- Advertise the Microsoft Office PowerPoint Viewer.
- Install the Microsoft Office PowerPoint Viewer on SEA-CL1
- Advertise the Microsoft Office Word Viewer.
- Install the Microsoft Office Word Viewer on SEA-CL1.
